

 **Pissmerino**
Wool that excites. Sheep that thrive.

2023 Longreach Ram Sale

70 QLD rams specially selected and bred for QLD conditions

Friday 21 July 2023 @
Longreach Showgrounds or
farmgateauctions.com.au
10am Inspection
1pm Auction starts

Sale Information

Welcome to our 2023 Longreach Ram Sale. We are so glad you made the effort to come and look at our sheep. We are the furthest thing from salespeople, so are excited that you can come and see the sheep in person. We think they speak for themselves.

Our aim is to breed **robust, fast-growing, unmulesed** merinos that grow plenty of **beautiful, soft, white wool** on an animal with **wide, deep, structurally sound** bodies.

We want to breed merinos that thrive in the paddock and don't need any chemicals to keep them going. **We expect sheep to work for us, not make work for us.**

Wool that Excites! Sheep that Thrive!

We are proud of our wool. Our environment places massive pressure on maintaining white wool. We've said for a while now that if we can get white wool here, we could guarantee it will be white anywhere!

Get your hands in the wool. **Feel the softness.** Our average comfort factor is 99.96 in the sale team!

But the animal carrying that wool needs to thrive also. Note the width and depth of body and the depth of their twists. People tell us they can't find the depth and volume on our rams anywhere else they go. Note also the positive fat and muscle. We know how important this is and it is an area we are focused on improving. They are survivors and are beautiful eating.

Let's not forget their fertility. Big scrotums and **nearly half the rams in this catalogue are in the top 10% of the industry for ERA**, which is the ASBV that indicates how well lambs survive from preg scanning to weaning.

Custom Index

With the help of the team at NeXtgen Agri, we have developed a custom index designed for the extensive grazing systems in Central/Western Queensland. It places strong selection pressure on lamb survivability, early growth, ewe condition score, fleece weight and reduced micron. It also places pressure on visual wool characteristics and breech traits. You will see this labelled as "Index" in this catalogue and on the pen cards.

Health information

Brucellosis: We are accredited for brucellosis and tested brucellosis free
Vaccinations: All rams had Glanvac 6 at 6 weeks, 12 weeks and 1 year
Drenched with Zolvix: 03/01/2023

Fertility

All ram testicles were checked by the vet and confirmed as sound on July 10th, 2023.

Catering

Morning tea and lunch will be provided.

Outside Agents

Will be offered a 3% rebate if you introduce buyers to the selling agent at least 24 hours prior to the sale.

Selling agent Steve Maunder. LRWrural@outlook.com. 0409 001 107

Ram pickup

There will be loading facilities at the showgrounds. Please pick up your rams by midday of Saturday July 22.

If you require delivery, please call us on 0431 071 766 prior to the sale, however, we cannot guarantee that we will be able to deliver any rams.

Mob management

All our sheep are run in large mobs in commercial conditions. Soon after marking, all our ewes and lambs are boxed together. From weaning, the lambs continue to be run in just two groups (rams and ewes) up until they get sold or joined. This allows to minimise the environmental impact on what you see at sale day.

We believe in pushing the limits to let the cream rise to the top.

As an example of this, we did not jet our ewes last year despite having 24 inches of rain fall on them over summer. The immense fly pressure allowed us to cull the few sheep that couldn't handle the conditions.

Data collection

We have collected 40-60 different data points on each of these rams, many of which get submitted to Sheep Genetics and turned into ASBVs - basically estimating the underlying genetic performance of the rams.

In this catalogue you will find the figures we feel are most important to know about each ram. Different ones will be more or less important to different people. See a description of each ASBV to the right and work out which are important to you.

On the next page of the catalogue, you will also find a list of the sires of the auction rams.

ASBV descriptions

Note: ASBVs are quoted relative to the average of the flock in 1990. E.g. WWT 4 means 4kg heavier at weaning than the average 1990 sheep.

WWT, PWT, YWT, AWT: Growth traits at different stages of life - Weaning, Post weaning (6-9mths), Yearling and Adult - expressed in kg. Higher is good, but we also don't want massive sheep that eat too much grass.

YFAT: Yearling fat (mm). The amount of fat in covering the loin. Even small increases in this trait gives you greater survivability through tough times.

YEMD: Yearling eye muscle depth (mm). The depth of the eye muscle in the loin chop. Higher EMD gives you sheep that stay in better condition.

EBCOV, EBWR: Early breech cover & breech wrinkle, based on a 1-5 score. More negative values means a barer and plainer breech, meaning no need to mules, and is a key trait to eliminate flystrike without mulesing.

YSC: Yearling scrotal circumference (mm). Bigger testes give you more fertile daughters.

ERA: Ewe rearing ability (number of lambs weaned per lambs born). The higher it is, the better the ewe is at keeping her lambs alive to weaning.

PWEC: Post weaning worm egg count (%). More negative means the sheep are more resistant to worms.

YFD: Yearling fibre diameter (micron). The lower this is, the finer micron you will have.

YSL: Yearling staple length (mm). The higher this is, the longer wool you will grow.

YCFW: Yearling clean fleece weight (%). A higher number means it cuts you more wool.

YDCV: Yearling diameter coefficient of variation. The lower this number, the more even and consistent is the fibre diameter of the wool (lower FDSD). Interestingly, more negative YDCV is highly correlated with a better all round sheep.

Index: Our custom index developed with NeXtgen Agri to suit extensive Central/Western Queensland environments.
