Wool that excites. Sheep that thrive.

**3rd On Property Ram Sale**

# 70 Profitable productive rams for the Modern Merino breeder

Wednesday 20 September 2023

@ "Rosedale", Yelarbon or

[farmgateauctions.com.au](http://farmgateauctions.com.au)

9:30am Inspection

1pm Auction starts

## Sale Information

**Welcome to our 3rd On Property Ram Sale.** We are so glad you made the effort to come and look at our sheep. We are incredibly happy with the sale team this year! Last year, we embarked on a large AI program with semen from across Australia. We have some outstanding rams to show for it.

Our aim is to breed **robust, fast-growing, unmulesed** merinos that grow plenty of **beautiful, soft, white wool** on an animal with **wide, deep, structurally sound** bodies.

We want to breed merinos that thrive in the paddock and don't need any chemicals to keep them going. **We expect sheep to work for us, not make work for us.**

## Wool that Excites! Sheep that Thrive!

We are proud of our wool. Our environment places massive pressure on maintaining white wool. We've said for a while now that if we can get white wool here, we could guarantee it will be white anywhere!

Get your hands in the wool. **Feel the softness.** Our average comfort factor is 99.94 in the sale team!

But the animal carrying that wool needs to thrive also. Note the width and depth of body and the depth of their twists. People tell us they can't find the depth and volume on our rams anywhere else they go. Note also the positive fat and muscle. We know how important this is and it is an area we are focused on improving. They are survivors and are beautiful eating.

Let's not forget their fertility. Big scrotums and many of the rams in this catalogue **are in the top 10% of the industry for ERA**, which is the ASBV that indicates how well lambs survive from preg scanning to weaning.

## Online Interface and Presale inspections

Anyone who can't be there on sale day can bid online at Farmgate Auctions. Give us a call to organise any presale inspections.

## Lots 11-20

In general, we run all our rams in one big mob. However, this year we were forced to pull about 20 rams out of the main mob and run them separately (they were being bullied too much). They were put in a small cultivation near the house and absolutely bolted away, putting on over 440g/hd/day for a couple months. As a result, they are now significantly bigger than the rest. This is a wonderful example of feeding, not breeding! Note also that lots 31-36 are 4 months older than the rest.

## Health information

All ram's testicles were checked by the vet on August 27th, 2023.  
Brucellosis: We are accredited for brucellosis and tested brucellosis free.  
Vaccinations: Glanvac 6 annual booster 27/08/2023.  
Drench: Once at weaning, then again on 27/08/2023 (Startect).  
Clik on poll only: 31/08/2023.

## Catering

Morning tea and lunch will be provided.

## Outside Agents

Will be offered a 3% rebate if you introduce buyers to the selling agent at least 24 hours prior to the sale.  
Selling agent Steve Maunder. LRWrural@outlook.com. 0409 001 107

## Ram pickup

There will be loading facilities on the day.  
If you will require delivery, please call us on 0431 071 766 prior to sale.

Lot 2

Lot 4

## Mob management

All our sheep are run in large mobs in commercial conditions. Soon after marking, all our ewes and lambs are boxed together. From weaning, the lambs continue to be run in just two groups (rams and ewes) up until they get sold or joined (*Except for lots 11-20 this year*). This allows to minimise the environmental impact on what you see at sale day.

### We believe in pushing the limits to let the cream rise to the top.

As an example of this, we did not jet our ewes last year despite having 24 inches of rain fall on them over summer (early 2022). The immense fly pressure allowed us to cull the few sheep that couldn't handle the conditions.

## Data collection

We have collected 40-60 different data points on each of these rams, many of which get submitted to Sheep Genetics and turned into ASBVs - basically estimating the underlying genetic performance of the rams.

In this catalogue you will find the figures we feel are most important to know about each ram. Different ones will be more or less important to different people. See a description of each ASBV to the right and work out which are important to you.

On the next page of the catalogue, you will also find a list of the sires of the auction rams.

## ASBV descriptions

**Note:** ASBVs are quoted relative to the average of the flock in 1990. E.g. WWT 4 means 4kg heavier at weaning than the average 1990 sheep.

**WWT, PWT, YWT, AWT:** Growth traits at different stages of life - Weaning, Post weaning (6-9mths), Yearling and Adult - expressed in kg. Higher is good, but we also don't want massive sheep that eat too much grass.

**YFAT:** Yearling fat (mm). The amount of fat in covering the loin. Even small increases in this trait gives you greater survivability through tough times.

**YEMD:** Yearling eye muscle depth (mm). The depth of the eye muscle in the loin chop. Higher EMD gives you sheep that stay in better condition.

**EBCOV, EBWR:** Early breech cover & breech wrinkle, based on a 1-5 score. More negative values means a barer and plainer breech, meaning no need to mules, and is a key trait to eliminate flystrike without mulesing.

**YSC:** Yearling scrotal circumference (mm). Bigger testes give you more fertile daughters.

**ERA:** Ewe rearing ability (number of lambs weaned per lambs born). The higher it is, the better the ewe is at keeping her lambs alive to weaning.

**PWEC:** Post weaning worm egg count (%). More negative means the sheep are more resistant to worms.

**YFD:** Yearling fibre diameter (micron). The lower this is, the finer micron you will have.

**YSL:** Yearling staple length (mm). The higher this is, the longer wool you will grow.

**YCFW:** Yearling clean fleece weight (%). A higher number means it cuts you more wool.

**YDCV:** Yearling diameter coefficient of variation. The lower this number, the more even and consistent is the fibre diameter of the wool (lower FDSD). Interestingly, more negative YDCV is highly correlated with a better all round sheep.

## AI Sires list

On this page and the next, you will find the figures for all the sires of the rams in this catalogue for your reference.
