

Drum Throne Install Instructions

01

Assembly of support poles

- Align the hole in the middle of the plastic head with the support iron rod, and insert it to the end.

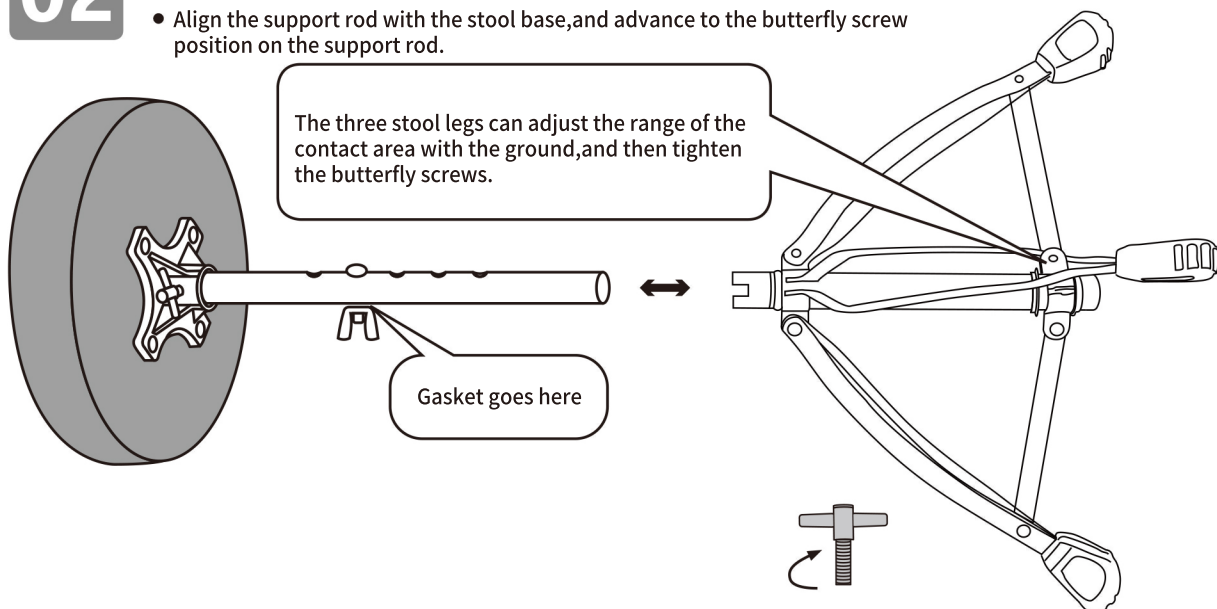

This support rod is divided into five gears, and the height can be adjusted according to the individual's height. Select the desired hole, and then tighten the thumb screw.

02

Assembly of the base

- Align the support rod with the stool base, and advance to the butterfly screw position on the support rod.

The three stool legs can adjust the range of the contact area with the ground, and then tighten the butterfly screws.
