

997 CARRERA REAR WING

PART #:99711

INSTALLATION INSTRUCTIONS

Please Note: Installation should be done by a professional body shop. Part must be pre-fitted on to car before part is painted.

Included: 3rd Brake Light

1. Remove original electric spoiler from engine lid
2. Remove 2 bottom pieces from new Carrera wing
3. Install new wing on to on top of original engine lid; threaded bolts should be coming through bottom of engine lid
4. Use 2-sided tape or bonding adhesive on bottom edge of Carrera wing to hold down against engine lid
5. Once wing is in place put the 2 under pieces back on to threaded bolts and secure down using nuts
6. Feed wire from existing brake light through engine lid using female wire ends. Attach to male plugs on back of new Porsche® light

It will be necessary for the body shop doing the installation on your Carrera wing to drill a hole in the center edge of your engine lid (as shown in picture) to allow perfect fit of the outer ledge of the grill base that attaches to your engine lid. This will allow the last louvered bar to be adjusted to same height as the panel behind the window that houses your 3rd brake light.
