

Congratulations on your new PC! Accessing the I/O panel and connecting your peripherals to the Tower 300 is easy! Follow along this guide to learn how:

STEP 1

Remove all three front glass panels to access the back side.

STEP 2

Turn the case around and remove the top panel by pulling up.

STEP 3

Loosen the 2 thumb screws to swing the top fan bracket latch open.

STEP 4

Feed your cables through the vent on the right side.

STEP 5

Connect your peripherals into the corresponding port(s) in the I/O.

For monitors and displays, connect directly to the appropriate port(s) on the graphics card/GPU.

Do NOT plug your monitor into the graphics port on your motherboard, as it is disabled when a graphics card is installed in your system.

** Images for reference only. Port layouts may vary based on components used.
