

# Maintenance

Dear Slingshot Hitch Owner

**It is highly recommended after you install your new hitch to take a short run with your trailer maybe 10-25 miles round trip and then check your bolts / re-torque your mounting nuts and bolts.**

**Please carry tools with you on your longer trips to do this regular maintenance before during and after each trip.**

**There is a lot of shake rattle and rolling going on back there on these roads, so please do the maintenance along the way.**

**I recommend carrying a small hydraulic jack that will fit behind your seat storage. You can place the jack under the swing arm to jack it up if you need to. I've included star lock washers to help maintain tightness of your bolts.**

**NOTE: Optional, Try using a Thread locker Blue Medium Strength.**

**Thank you again for your business**

***Happy and Safe Trails To You***
