

Florina , 02/06/2015

Dear Colleague,

We send you the results from the analysis on a patient Ms XXXXXX suffering from melanoma **stage 0**. The sample that was sent to us for analysis was a sample of 20ml of whole blood that contained EDTA-Ca as anti-coagulant, and packed with an ice pack.

• normal cells after centrifugation and positive selection using anti-CD63 as cell marker and negative selection using anti-CD45 particles.

The results during the isolation procedure are presented below:

Table of markers:

CD45 positive cells (Hematologic origin cells)		CD45 negative cells (non Hematologic origin)	
Nanog	NEGATIVE	Nanog	POSITIVE
OKT-4	NEGATIVE	OKT-4	Dim POSITIVE
Sox-2	NEGATIVE	Sox-2	NEGATIVE
		CD63	POSITIVE
		EpCam	POSITIVE
		CD133	POSITIVE
		c-MET	NEGATIVE
		CD31	NEGATIVE
		PanCK	Dim POSITIVE

Index of marker: CD45: Hematologic origin cell marker, CD133, Sox-2, OKT-4, Nanog: tumor stem cell marker, CD31: endothelial cell membrane antigen, **CD63: melanoma membrane marker**, EpCam: Epithelial origin marker, PanCK: epithelial origin marker, c-MET: membrane antigen that regulates the mesenchymal to epithelial transition.

The final results after the isolation procedure are presented below: We notice that after isolation procedure there are remaining malignant cells. The concentration of these cells was isolated **6.4cells/ml, SD +/- 0.3cells.**

Sincerely,

Ioannis Papisotiriou M.D., PhD
Head of molecular medicine dpt of
R.G.C.C.-RESEARCH GENETIC CANCER CENTRE LTD

Index of circulating cells number: (If Over Limit: Advanced or Progression of Disease, If Less than limit: Early disease or disease is responding to a treatment plan).

Breast cancer: < 5cells / 7.5ml, **Prostate cancer** < 20cells/ml, **Sarcoma:** <15cells/6.5ml, **Colon cancer:** <5cells/ml, **Lung cancer (Lc=0, r=0.99):** <10cell/ml. **All cancer types other than those listed above should be <5 cells/ml.**

*This test will NOT DETECT cancers of the brain or other cancers that have been “encapsulated” by the body, not releasing circulating tumor or stem cells (CTC, CSC) into the blood stream or if any of these cells are dormant. We still recommend the use of biopsy, blood markers and/or various scans with this test when cancer is suspected or known to exist.No test is 100% accurate.
