

# **BIOPTRON LIGHT & COLOUR THERAPY IN BOARDING KENNEL & CATTERY**

I brought my Bioptron Light and Colour Therapy set five years ago and with Mirjana's support have used it regularly on myself, my family and animals.

One example was a dog called Minty, she was going to be put down because she got very grumpy. Sometimes she would bite for no reason. I thought I would try colour therapy. I started working on her neck and liver. I also recommended a light collar for the dog. I'm happy to say five years down the track and Minty is a happy dog. She is now 15 years old. She was angry because the collar hurt her neck and when she looked up it hurt and blamed that on the person who was going to pet her. Also her liver had been playing up because as it turned out lead paint had been falling off around her house affecting her liver. The paint is all off now and the area has been painted with better quality paint.

Recently also some sick kittens from my local SPSA I have been using colour therapy to help them with orange for immune system, purple for inflammation and green for healing. After a couple of days of colour therapy, I see much happier healthier kittens and once they are fully recovered I take them back so they can find new homes.
