

HORSE SPLIT HOOF CORONET

Calando, well known to all of us through competitions, had a split hoof coronet. The place of the injury was rather inaccessible, therefore operation was not possible. A very painful handicap for Calando.

Mrs Nagel was ready to immediately use the BIOPTRON treatment on the horse. He was treated twice daily for 2-6 minutes. Success was not long in coming. Calando is a show jumper again. He is still being treated to ensure continuing health.

Mrs Nagel was thrilled, so she kept the Biopton for other applications.
