

HORSE SARCOID ON THE NECK

TREATMENT OF SARCOIDS

My seven-year-old Quarter Horse had a sarcoid as large as a 50-cent piece on the neck, a smaller one below it the size of a 5-cent piece, and a third one as big as a 1-cent piece in the centre of his chest.

After applying Bioptron Light and Colour Therapy, within a couple of days, there was a visible decrease in size.

They were quite a considerable amount smaller within a month, and hair had started to grow.

By a couple of months, all the sarcoids had healed.

I applied the Bioptron Light and Colour Therapy every other day.

I was not prepared to use any drugs and could not be happier to have used the Bioptron Light and Colour Therapy.
