

SEVERE HEAVY BRUISING WITH BAD CIRCULATION

December 16 2002

I am a 75-year-old pensioner of Avondale, and have been undergoing treatment from Ms Lee McInroe on both my legs through the use of her Biopton light therapy for approximately four months now. Both my legs sustained severe heavy bruising as a result of an accident from a fall, which left them with dark purplish patches on my shins that did not allow for regular blood circulation. This lack of blood circulation caused my skin to become extremely fragile and susceptible to the merest abrasion or pressure that when pierced would take weeks and sometimes months to heal. The pain from all these ailments made for many sleepless nights. I was prior to this taking a cocktail of pills and tablets prescribed me by my doctor for my problem but to no avail -if anything, I now believe this to have exacerbated the problem further.

Since undergoing this Biopton treatment my legs have since lost the dark discolouring of the skin. I can also now walk around a lot more freely without any more pressure or tenderness being felt in either of my legs from my weight. I no longer feel any more cramping which regularly interrupted my sleep most nights causing extreme discomfort.

Needless to say, the eventual improvement on my legs in turn led to the same Biopton treatment being applied to other parts of my body i.e. the neck, head, spine, hips and feet. I can now say that I feel much more energised and revitalised that I am now able to do a whole range of things that were previously a struggle for me. I am forever grateful to Ms Lee McInroe for having made this all possible through her Biopton light therapy. In saying this I would not hesitate to recommend her form of therapy to anyone, whatever his or her ailments. Her therapy for me has been a tried and true exercise, and I cannot recommend it strongly enough.

Mrs. R McCarthy
