

TINNITUS AND ACUTE HEARING PROBLEMS

General Manager
Zepter NZ Ltd
Auckland

5 November 2000

Dear George,

I began using my Biopton Compact at the beginning of September this year to treat Tinnitus and acute hearing problems.

During the first week of treatment (twice a day) the sound of the 2-minute beep was unbearable, however with continual daily treatment the sound has become less distressing. The high-pitched ringing in my ears is now unnoticeable, only slightly returning at the end of a busy twelve-hour working day. This is quickly alleviated with Biopton treatment before sleeping.

Prior to using the Biopton the maximum amount of massage therapy I could achieve without suffering undue muscular stress was 3-4 hours per day. Using the Biopton morning and evening on hands and tippet" Trapezlus and neck Flexor and Extensor muscles I am able to achieve at least 8 hours of massage with absolutely no muscle ache during working hour& The only discomfort exists when I wake up and the ache disappears after Biopton treatment.

I am so happy that I am no longer limited during my daily work load in massage therapy.

Yours sincerely

Veronica Strong
