

# EYE CONDITION AND CATARACT

Dear Bioptron team,

Six months into my eye treatment I have to report my right eye which was damaged by a truck passing over me responded to the Bioptron Light by ceasing to be constantly inflamed and sore after 3 months. General eye health has improved beyond what I expected. The beginning of a cataract in the right eye tested minimally better at 3 months, but I have yet to be tested at 6 months.

I will let you know when it takes place, however 42 years of inflammation in the right eye being reversed in 3 months is quite an impressive turn-around.

Yours,

Don Moore
