

FIBROMYALGIA, DERMATITIS, KIDNEY CONDITION, CARTILAGE DAMAGE, AND DOG TUMOUR

Dear George

I am sending this e-mail to you to express my joy at having purchased a Biopton light.

I was diagnosed four years ago as having fibromyalgia (inflammation of the muscles, tendons and ligaments) and on reflection had probably suffered from it for almost twenty years. As a result of fibromyalgia becoming more severe, I had to resign from my position as stock manager on a beef breeding farm.

At the end of 2010, I was introduced to Graham O'Gorman who was in our area treating people with his light. I must admit that initially, I was rather skeptical that this therapy was going to help my health in any way but was willing to try anything to get back some form of normality in my life. After the first four days, my daughter's dermatitis on her hands had cleared which made me realise we were maybe on to something useful.

At just past the three-week mark I began to realise how much better I was feeling. It took till the end of the fourth week (I carried on with the program one week longer as it was a long-standing illness) for me to feel basically no pain. I also had a lot clearer facial skin and my hands, which normally feel rougher than the coarsest sandpaper, were now smooth. I had also been having some significant premenopausal problems which cleared completely.

My 23-year-old son, Nathan, who had bilateral renal reflux when he was born and had a nephrectomy when he was 18 months old also saw Graham at the same time and had his remaining kidney treated as this had been damaged and is only approximately 20 percent functional. Nathan saw his Nephrologists for his yearly check-up in February and his kidney function had improved and was the best it has been in 8 years.

Graham also treated our 11 year old English Setter who has a tumour on his hind leg and testicular cancer. Graham treated both areas plus the brachial chakra. At the end of the treatment, both the tumour and the scrotum had lost the ugly purple colour. The dog also became a lot more livelier.

I have used the light on my partner's knee that was scanned 2 years ago and showed cartilage damage. Surgery was recommended but due to running our own business that

was not an option at the time. After using the light on the knee for only 4 days the pain had diminished and he was able to sleep all night. Considering he is driving large trucks for on average 10 to12 hours a day this was an amazing result.

I hope more people become aware of the capabilities of the Bioptron light and enjoy the benefits as my family has done. I thank you for providing this marvelous product for which we are eternally grateful for.

Kindest regards
Leanne Winter
