

SEVERE INJURY ON LEFT INDEX FINGER

I had a severe injury on my left index finger. The emergency clinic could do little to help, as the wound was unstitchable. I used the Bioptron light because it seemed harmless.

- Day 1 and 2: - Relief from stinging and pain
- Day 3: - Swelling and tenderness reduced
- Day 4: - Exit wound was fully closed
- Day 5: - The dressing was taken off and the entry wound was almost closed.
- Day 6: - Only minor discomfort

I used Bioptron twice daily and was astonished at the speed at which my wounded finger healed.
