

CONSTANT PAIN AFTER HIP REPLACEMENT

To whom it may concern

I have been using the Bioptron Light for about a year now.

I was born with a congenital right hip and had a total hip replacement at age 34 in March of this year. I have been suffering from this complaint all my life and have tried several conventional treatments as well as having operations since birth. Before the operation I was in constant pain especially in colder weather and had very limited movement which as a result I occasionally had to use a crutch.

As part of my treatment at the Spine & Body Clinic I was using the Bioptron Light on my hip area regularly and was amazed at the results. It was more effective than the anti-inflammatory and painkillers prescribed by my GP. I had less pain, more movement, and more mobility the next day after my treatments. I found it so effective that I purchased one myself to use at home and I believe it aided in my quick recovery after the operation. I still use it for pain I get in my knee and for helping reduce my scar tissue.

I thoroughly recommend the use of the Bioptron Light for other people with medical complaints similar to mine.
