

IMMENSE PAIN AND SWELLING AFTER KNEE REPLACEMENT

A horse trainer, Morris is always talking about Bioptron Light and Colour Therapy. His success with colour treatment has earned him a reputation amongst his fellow horse trainers and breeders.

Recently he was visited by a 73-year-old horse breeder and farmer, who was struggling with immense pain and swelling in a knee operated on for the replacement of joint. He had been asking around the local trainers for a pain killer normally administered to horses but not available in NZ.

Our friend Morris sees the opportunity and the next thing he was been treated to colour therapy treatment followed by full treatment with Pro. The result was spectacular. He could now bend and raise his knee above his waist

It turned out that Ian was to be a new client with a special mission in mind. Ian is an opera fan and was due to fly out within days for a Tour of Europe's famous operas. The thought of 24 hours travel without the assistance of Bioptron Light and Colour Therapy was a compelling reason to purchase the Light and Colour Therapy System.

He is very keen on Pavaroti and did not want to anything get in the road of his pleasure.
