

EMPHYSEMA OF THE LUNG

Zepter International NZ

5 November 2000 In January of this year I purchased a Bioptron Compact with Colour and received marvellous results on myself in a short time.

However, the most exciting treatments and which have made an exceptional difference to a dearly loved person are those that I did to improve my Dad's health. He has been suffering from emphysema for several years, slowly deteriorating in health and wellbeing from this debilitating disease.

He began using the light every day on his lungs, treating the front and back with the "white" light; and using the indigo light on the energy field across the lung area for 4 minutes front and back. In addition to this treatment I had Dad on the "Deblocking to relieve Stress" program which has helped so much to alleviate his anxiety levels.

He also suffered from fluid retention with swelling in the legs and feet, so has also used the "Heavy Legs" program. The results from this were amazing as the first time we did the program all the fluid dispersed and the swelling went down in half an hour.

The Stress program was done in the morning and the Heavy Legs done in the evening.

Overall his breathing has improved 60% - 80%, his immune system seems much stronger and he is more positive and happier in himself. He loves using the light, as he feels better afterwards so he treats himself several times a day.

Thank you Zepter for Bioptron!!
