Dr. Gordana Mirkovic
Polarised Light Therapist

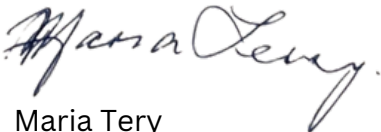

Dear Gordana,

Re: Bioptron Light

I came to the salon with a diagnosed lupus that had been unsuccessfully treated by classical medicine for 3 years. I received the light therapy three times a week in the duration of 10 minutes with the Bioptron Light in conjunction with the Oxy-Spray. Already after 5-6 treatments the redness of the skin around the eyes and only hyper-pigmented skin remained, which is healed at a slower rate. The patches of red skin, hyper-pigmented skin and any skin without pigment in the treated zones had started to regain the colour of the surrounding skin. Aside from the skin getting better, I felt my psychological state of mind change for the better as a result of the light therapy. In the sense that I was in a better mood, more confident, and after such a long time I had the wish to persevere with continuing the treatment because I noticed the results in a very short time frame.

I would sincerely recommend this type of therapy to anyone with similar problems.

Yours Sincerely,

Maria Tery
