To whom it may concern,  
Re: Bioptron light

When we arrived in NZ for six week's holiday just after Easter, my daughter told me she had become an agent for the Bioptron light, [I must admit to never having heard of it] and she would do some treatments on me for my tinnitus, after six treatments it was 50% better than it was before, now having had more treatments it is 75% better and I can hear conversations around me that I could not hear before.

Anne also treated a bruise on the back of my leg that developed after having injections for varicose veins about 20 years ago, and it has never gone away, it has always been very black, well now after treatments on that with the light it has very nearly gone.

I am so pleased with the results I got Anne to get us a light to take back to England with us.

Oh! my husband has had treatments on his neck, he has always been in pain because of a whiplash that he received about 15 years ago, he now goes most days without pain.

So with our own light we should be fighting fit in no time, we are now in our 70's and feel that we will have many more pain free years.

I have to say thanks to the Bioptron light therapy and we wish the best for everyone who gets a light.

Yours sincerely,
