

REDUCED PIMPLES, HEALED MARKS AND SCARS

The patient had a high number of red pimples, especially in the area of the chin (Image 2A). Bioptron Hyperlight Therapy was used during three weeks, 10 minutes/day. Thanks to the treatment, the number of pimples was significantly reduced and the few pimples that remained were smaller (Image 2B) and more superficial. At the same time, the regenerated skin looked smoother. Marks and scars almost disappeared.
