

# BROKEN CAPILLARIES ON SKIN

Dear Gordana

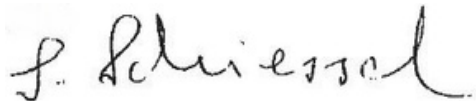

Re: Bioptron Light

When we started the treatments on my skin, it had broken capillaries, red patches and hyper-pigmented patches with scaly skin on them. On the middle of my forehead there was a small erosion with red swollen skin around it. My skin was too dry and sensitive for me to use any cosmetic product. One weekly treatment with the Bioptron for 10 minutes – and colour therapy for 5 minutes ( both with the Oxy Spray) had very expedient results.

The bio-informed therapeutic products helped me immensely, in-home use to support treatments in The clinic, with regard to the fact that I was unable to use any other cosmetic products due to the condition of my skin. After 5 treatments the erosion had disappeared, and soon after the scaly patches did as well. The red patches were either completely gone or are still present in a much smaller radius.

Currently I started using, aside from the therapeutic products, Swissological cosmetics, which do not give me any allergic reactions. I am very impressed by the result of the light therapy and would recommend it to anyone with similar problems, particularly of my age group. I thank you sincerely for your assistance and ! really hope that many others will follow my route and experience the same wonderful results.

Your sincerely,

Suzane Schciessel
