

# PSORIASIS OF THE FEET

Hi Simon

Bioptron Light/ Psoriasis

I have suffered from psoriasis of the feet for the last 2 years and have put up with the irritation using only Dermovate cream for the small relief it provides.

I had 2 treatments with acupuncture and Bioptron Light Therapy before continuing with straight light applications for a period of 2 weeks. I was regularly using the light morning and night and after the 3rd week when the condition had settled down, I was less diligent in my rate of application.

Both feet had cleared completely of the condition much to my relief by the end of the 3rd week. The last 4 months have seen the condition flare up only once since then and it was remedied by two light treatments.

If the pustules ever return I will certainly halt its progress by simply applying the light for another couple of treatments. This tool is brilliant at breaking the cycle of psoriasis and giving normality back to life.

The simplicity of this therapy belies the effectiveness of the work the light can achieve in all areas of health. The greatest relief is knowing the light is always there and doesn't require a trip to the Doctor or more expensive creams. The average psoriasis sufferer will have spent more on creams potions and Drs visits than the cost of one of these Lights.

The physical and emotional relief this light provides has made it one of my better investments.
