

FIVE YEAR ULCER COMPLETELY HEALED

Hi Stephen

I'd be delighted to give you a testimonial!

I have some very good news to share.

I had a venous ulcer on my left inside ankle for almost FIVE YEARS. I pursued every treatment option I had found, including having my great saphenous veins stripped, Manuka honey, crystal therapy, lymphatic therapy, magnet therapy, years of four-layer compression bandaging and ultrasonic debriding (extremely painful!) Over the almost five years I had cycled in and out of optimism, depression, weight gain, lethargy, lack of exercise, hopelessness, always chronic pain, sleeplessness, etc. The journey has been amazing, the people I have met and the treatments I have tried have been wonderful. All the treatments helped a little but nothing ever make the ulcer heal completely.

After four months of ten minutes twice daily shining the BIOPTRON polychromatic light on my ulcer, it has finally completely healed!!!! Hooray!

Thank you Stephen for coming to my house to demonstrate its use, leaving me with all the information and making more available to me. I followed up with a couple of authors of papers myself before deciding to buy the BIOPTRON light. All I can say is, it worked for me! Now I just have to save up to get the bigger model for my clinic!

Thanks again.
All the best
