BIOPTRON 
HYPERLIGHT THERAPY SYSTEM by Alcon Group

12 Oct 2002

Dear Biopton team,

On February 10, 2001 a small stone entered my shoe, piercing the underside of my foot. On March 2001, due to insufficient circulation in my legs I underwent angioplasty to my right leg.

This was unsuccessful and a chronic ulcer formed at the site of the injury.

In June 2001 I was admitted to Middlemore Hospital for a Femoral Bypass, resulting in a slight improvement of the ulcer, but it again deteriorated after tripping at work. I was then admitted back into Middlemore for a surgical debridement and a 3 month course of antibiotics as osteomyelitis was present in the bone.

I was constantly under the care of the Super Clinic Podiatrist and the District nurses- one of whom mentioned a patient who was successfully treated with a "special light". This was in March 2002.

After making some enquiries I discovered a friend also owned a BIOPTRON lamp and was very positive about its healing qualities. I contacted Audrey Tomlin and she loaned me a light for a week, which resulted in my decision to purchase a lamp for myself.

The rest is history!!!.

The ulcer under my first M T P Joint responded to the BIOPTRON lamp so well that by December 2002 the ulcer had almost healed.

The results of the BIOPTRON lamp have amazed my doctor.

Yours truly
Len Meek
