

LEG ULCER AND HOLE IN THE GROIN

09-06-2020

Graham Short
Taupo

Over the years, I have had great results with legs' ulcers. We had a Woman from Hastings who came and stayed a month with us. Both her legs were covered with ulcers; one hole up in her groin, you could see the bone and a golf ball wouldn't have touched the sides. After a month of treating her twice a day, they were all but gone, but her daughter came and took her home as she needed a babysitter.

I bought her a Light to take home.

Regards,
Graham
