HEALING LEG ULCERS

We have been using the Bioptron Light Machine in Shoal Bay Villa Rest Home for about two months now, mainly on leg ulcers and wounds for the joy of both my residents and mine. Four minutes per day on the wound with some oxy spray is all that you need to do. No Dressings on the wounds saved me some money but time as well. Wounds and bruises after injuries usually heal very slowly with old people and sometimes get infected, this prolongs the healing even more, With Bioptron Light Machine wounds after injuries healed nicely and quickly without any complications. Chronic al wounds haven't yet healed completely but are getting smaller, less inflamed, and the surrounding skin has got a healthier colour showing that the circulation has been improving.

I would recommend to everybody who has similar problems with wounds or leg ulcers to give it a go with the Bioptron Light Machine. You don't have anything to lose, there are no side effects and no harm that this wonderful machine can do to your body and I am pretty sure that it will help you as it has helped my residents.

Best regards,
