

WOUND HEALING AFTER ACCIDENT

I had had an accident at home where I hit myself on a sharp edge. After I noticed that the wound was not healing after a three-week period I decided to seek help in light therapy since I had heard of its excellent results with leg ulcers.

I came for therapy session 5 times a week for 6 weeks. Each session lasted for 10 minutes. During that time the wound had decreased in depth considerably and was at skin level, just the skin hadn't closed up yet. Since I had to go on a trip I stopped having therapies, but the wound still healed successfully.

I am very pleased with the results that the Bioptron light therapy device has given me and recommend it to anyone with the same problems.

Yours Sincerely,
