Dr. Gordana Mirkovic
Polarized Light Therapist

Re: Bioptron Light

I started with the light treatments due to pain and stiffness in my hips, but at the same time, I had treatments done on my face to affect my pituitary gland and thus the entire body. After the first treatment, I already started to feel the effects of the light therapy. That night I slept very deeply – longer than usual and in the morning I felt a lot more powerful and better rested than usual, and my hips were no longer stiff.

Excited about the excellent results of the light therapy I decided to start having regular treatment. After 5-6 more treatments there was no need to continue Therapy on my hips because they were not a worry anymore. However I still continued with the treatments on my face, not for cosmetic purposes but because of the pituitary gland, which was, in my case, reacting very positively to the treatments by contributing to a deeper sleep and a better mood during the day.

I am very pleased with the results of the Bioptron treatment and would like to extend my gratitude to Dr. Gordana for introducing me to a whole new aspect of healthcare and well-being.

Yours Sincerely,

Gwen Hart
