

RECOVERY AFTER STROKE

Good Morning, George,
I want to share with you, the story so far, of treatment for a client.

Judith was brought to me by her daughter (whom we met at the show) on 19th March. She had had a stroke 4 years ago and was obviously still living with limiting effects. Her right arm was bent across her body, her walk was difficult, and her speech was halting, with words lost, long pauses, and difficult enunciation. She had heard from her daughter about the light on the C7, and this was all she wanted. So that's what we did. She could only come once a week, so I saw her again on 26th March. She reported feeling more energy and clearer thinking. Then she came again 2 weeks later, on 8th April and another week later on 16th April. Each time, we did 10 minutes on the C7.

When she again came for treatment on 23rd April, she discussed and exhibited the following changes, from how she has been, according to herself and her daughter, for 4 years:

- Sensation and warmth in her right hand and arm.
- Able to grasp with her right hand, for actions such as opening the fridge door.
- Hearing in her right ear.
- Her speech was totally fluent and clear, with minimal or no pauses.
- She felt lighter and had more energy.
- Her cognitive function was much clearer.
- Able to recognise and remember numbers – able to phone her daughter because of this.
- Able to use a pen after the first treatment, with the writing legible.
- Able to relax her right arm from its bent position.

Judith said she feels like a teenager (she is in her 70's) and wants to tell the world. She is happy to prepare a testimonial. She also has haemochromatosis and is interested to know what her blood test shows next week.

I am honestly stunned at the visible changes which have taken place after a few weeks, from the fullerene lens on the C7.

Warmest regards,

Evelyn Manley
