

TIRED AND RED EYES DISAPPEARED

I am not a Consultant of Zepter company. I am a grateful client, in whose arsenal today there are 8 Bioptron devices, Medolight, 3 Therapy Air air purification systems, color filters sets, a Hand massager. As a client, I trust the company endlessly, but as a doctor, I try to recommend only approved effective treatment methods, which were tested by my own experience or by the experience of my colleagues and patients.

Having received the opportunity to try Tesla LightWear glasses I started wearing them with pleasure in the evening at home and in the daytime at work. Unfortunately, within the trial period, which lasted only 1 month, the weather was far from sunny, so I didn't have the opportunity to experience the sunlight protection effect of the glasses.

During the trial, I spent the main time in the office from 9.00 to 19-20.00. Over the past 5 years, I've noticed a sharp decrement in vision, my eyes started to get tired quickly, by the end of working time my eyesight deteriorated and my eyes became red. During my experiment, all these signs of eyestrain gradually began to pass off. After 1 week of using glasses, I noticed that they calmed tension well and working at a computer became more comfortable. After 2 weeks of wearing glasses, the evident redness of the eyes disappeared. By the end of 1 month, I became less irritable and calmer, which allowed me to fulfil a bigger volume of tasks.

At home, as a rule, I spent time reading an e-book or using a computer about 4 hours a day, 1 hour on social networks and about 1 hour watching TV. Usually, after 24.00 the eyesight fell sharply because of defatigation and the eyes became half-closed, what could be the cause of the appearance of extra mimic wrinkles. After the month of wearing glasses, I became more efficient, there was no sharp evening decrement in vision, there observed visual clarity. Thanks to a more comfortable light in the evening, which was created by the glasses, it became possible to relieve the tension of the whole body, to feel general relaxation and comfort. I began to fall asleep faster and sleep much tighter.

Thus, it should be noted that Tesla LightWear glasses are truly innovative and allow not only to make vision better, but also to create emotional comfort, to improve overall health, sleep, to relieve depression and to block harmful effects of UV rays, computers and phones.

I express my gratitude to the company for the honor to be among the first testers of Tesla LightWear glasses in Belarus.

Respectfully,
S.A. Kostritsa
