BETTER SLEEP, EYE COMFORT AND IMPROVED VISION

During the past month, I wore Tesla LightWear glasses 2 hours a day in average.

I noticed the following effects:

1. Improved sleep on the days when the glasses were worn;
2. Working at a computer became more comfortable - dry eye syndrome and eye strain disappeared, which positively influenced well-being in general: fatigue, and high blood pressure decreased.
3. I have myopia, however, when wearing the glasses without corrective lenses on a sunny day, there was an improvement in vision.

Thank you for the opportunity to test the glasses.

Sincerely, L. N. Dobriyanets
