

Tips For Success

1. To fill water tubes, use a spray bottle with the nozzle set to stream.
2. For flowers with thick stems or bundles, cut a few slits around the opening of the rubber cap.
3. We recommend making the flower displays (especially fresh flowers) within 24 hrs prior to the event.
4. Freshly cut flowers drink ALOT of water! Be sure to check/fill the water level before the event. To refill, gently remove the cap (with flower still inserted) and refill it. If slits were cut into the cap opening you may be able to fill by gently spraying through the stems without needing to remove the cap.
5. Shorter flower arrangements work best for top heavy flowers.
6. Add filler flowers to create individual mini bouquets or make separate filler flower vases as accents to create a unique style.
7. Add a topper around the base (stones, moss, ribbon, etc.).
8. Fresh flowers aren't your thing? Consider artificial flowers, air plants, or succulents.
8. If transporting, arrange them side by side in a stable box and assemble at the final destination. Do not stack them while transporting.
9. If mounting vases, mount them before inserting flowers.
