

INTRODUCING THE 1ST PERFORMANCE ENGINEERED MAN O-WAR MOTORSPROCKET

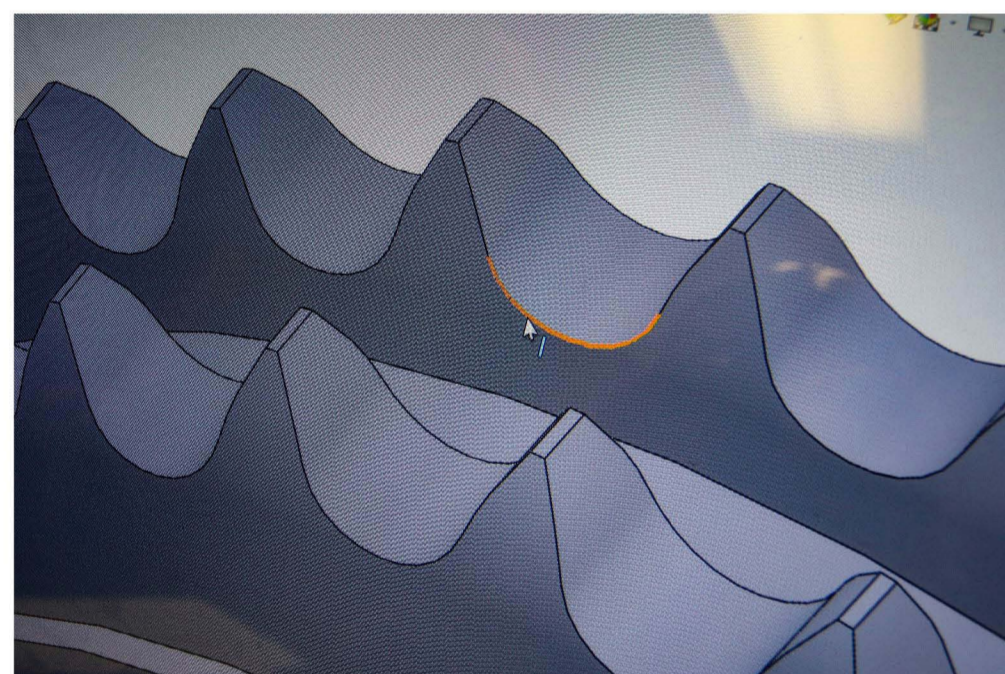

for Harley-Davidson 07' later Twincams® and Milwaukee 8's®

- Billet Machined - Balanced - 100% Servicable
- Engine Pulse Absorbing Cushion Drive
- Patented Instant Torque Transfer

Man O-War Motorsprocket system by Darkhorse

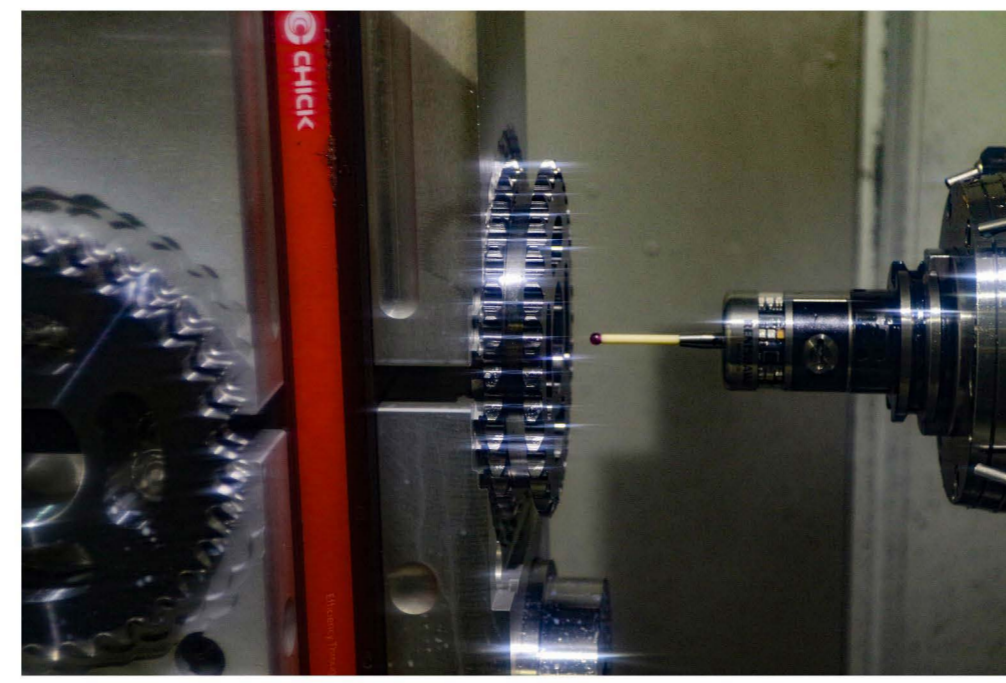

This motorsprocket is the 1st performance engineered primary motor sprocket on the market that provides “instant torque response” combined with an “engine pulse absorbing cushion drive” primary system for Harley-Davidson TwinCam® and Milwaukee 8® models.

Engineered to withstand the test of Time & Torque

Through extensive model design & testing, the Man O-War Motorsprocket is the only product on the market today that is engineered for longevity compared to OEM compensating sprockets without sacrificing rider comfort. This patented system also puts an emphasis on rider comfort compared to the noise and harsh feeling under loads associated with 1 piece solid motorsprockets.

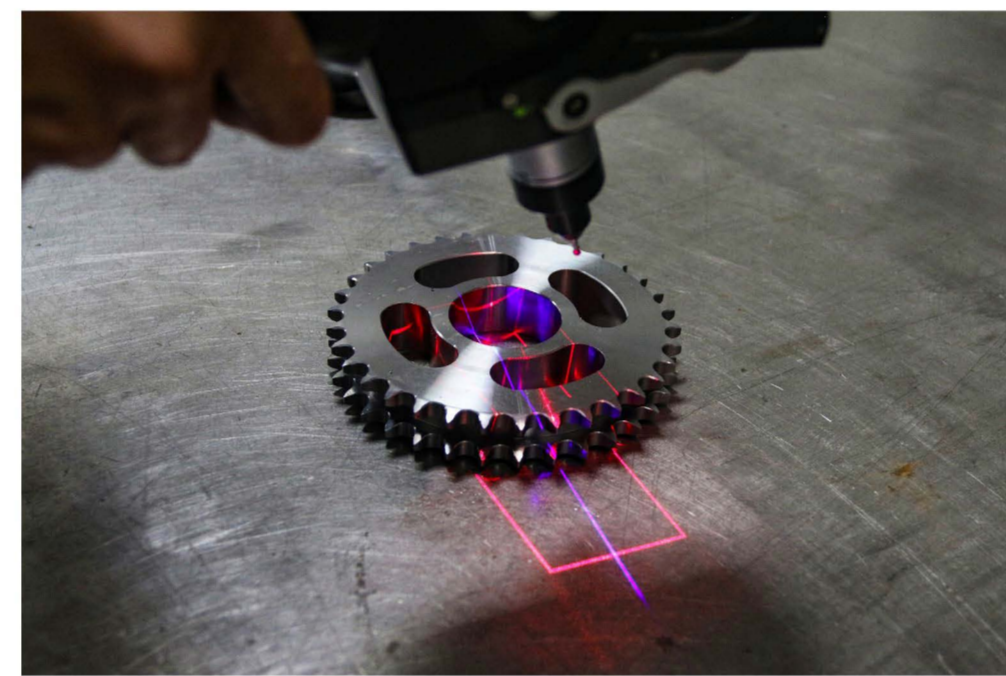

These premium features combined with being inexpensive to service versus expensive compensator based sprockets that fail and need to be replaced as an entire unit. The Man O-War will be the last motorsprocket you will need to buy for your Harley-Davidson TwinCam® or M8® model.

Balanced & Bulletproof

All these benefits combined with being a billet machined, balanced motorsprocket that weighs nearly 2 pounds less than the OEM compensator and ½ the amount of parts, you do not have to look any further to increasing your “trouble free” miles on your Harley-Davidson TwinCam® or Milwaukee 8® motorcycle.

Replacing cushions costs considerably less, estimated at under 1 hour labor with proper tooling and our certified 8 piece cushion kit.

Man O-War Motorsprocket Limited Warranty Issue 20.2

12 Month LIMITED WARRANTY

Man O-War Motorsprockets are warranted to be free from manufacturing defects in workmanship or materials for a period of 12 months from initial sale.

Warranty Statement

Darkhorse Motor Co. is not responsible for any product that has been subject to change, misuse, negligence, abnormal wear and tear, alterations, tampering or failure to follow operating instructions. This warranty does not cover any product or parts not manufactured by Darkhorse Motor Co.

Our obligation under the Limited Warranty shall be solely limited to repairing or replacing any part (see non-covered items) free of charge that, according to our judgement, show evidence of a defect in quality of workmanship or materials for the stated (12) month warranty period. All defective parts will be routed at Darkhorse Motor Co. discretion with freight or delivery charges to be prepaid. This Limited Warranty shall not be interpreted to render Hoban Cycle INC or Darkhorse Motor Co. liable for any injury or damage to persons, business or property of any kind nor expenses or losses incurred for labor, supplies, substitute machinery rental, or for any other reason.

Non-Covered Items:

- This warranty does not include normal wear items, including chains, cushions & bushings.
- This warranty does not cover labor in forms of maintenance, service or adjustments to motorsprocket system.
- This warranty does not cover damage due to misuse, negligence, accidents, or improper maintenance.
- This warranty does not cover damage due to improper application, installation, adjustment or setup.
- This warranty does not cover any or improper modifications to original OEM product.
- This warranty is void if any components have been disassembled.
- This warranty does not cover replacement parts not supplied by Darkhorse Motor Co.

*NEUTRAL NOISE - OEM H-D 6-speed transmission sets may incur increased “Neutral Knock” condition with the Man O-War Motorsprocket. It is caused by gear lash & high mileage transmissions and occurs while clutch is not engaged and transmission is in a Neutral state. Although audible, it is determined that this condition is a by-product of tighter tolerances in the primary system and loose tolerances in clutch or transmission. Clutch packs can help in absorbing engine pulse and there-by reducing inherent transmission lash noise at idle.
