HOW TO SAFELY USE THE WHOLE-HOME BACKUP KIT DURING A POWER OUTAGE?

Keep your critical home circuits running with a flip of the switch when a blackout hits. Forget expensive and complicated systems. Best of all, there are no fumes, noise, or messy gasoline to hassle with.

AUTO MODE: In AUTO MODE, the transfer switch will automatically switch to the backup power source when load shedding occurs. Make sure you do not exceed the maximum operating power of the Portable Power Station.

MANUAL MODE: In MANUAL MODE, after load shedding begins, switch manually to the backup power source through the full disconnect "off" position. Make sure you do not exceed the maximum operating power of the Portable Power Station. Manual mode is recommended for nobody at home or when you are sleeping at night.
