

Castellari Sharpening Stone user guide...

Castellari have been manufacturing high quality horticultural tools in Italy for over 30 years and their technology draws from the combination of three of Italy's best smitheries.

Sharpening Stone:

The Castellari Sharpening Stone is a course grit dry stone which can be used for sharpening your garden tools such as secateurs, snips, hedge shears and loppers.

To use the dry stone on bypass type tools, hold it along the cutting edge of your blade and grind along the bevel about 8 – 10 times. Turn your blade over and grind 3 – 5 times lightly taking off the burr (any filings that may have appeared due to sharpening the cutting edge).

To use the dry stone on anvil type tools, repeat as above however grind along the bevel on both sides of the blade.
