

WHY BUY

ORIGINAL LÖWE

History.

In 1923 Lowe developed the first anvil hand cutters in the world. Today there is hardly a country in the world where an original Lowe cutter is not used.

Anvil Cutters.

The robust and extremely versatile anvil cutters are suitable for the widest variety of materials, and can produce cuts up to a diameter of 40mm.

Internal Springs.

All Lowe cutters have a unique internal spring mechanism giving a smooth cutting action every time.

Carbon Steel Blades.

The steel used for these blades is specifically made for Lowe, and the combination of the alloy and a hardening process tailored to its unique characteristics gives the blades their unrivalled strength. All blades and hardened parts are also covered with a high-quality coating to prevent corrosion.
