## OFFICIAL WASHING & CARE GUIDE

### How To Wash Your Nappies In Four Easy Steps

#### STEP ONE: REMOVE THE SOLIDS

Drop poo in the loo and store the used cloth nappies in a dry pail.

#### STEP TWO: PRE-WASH

Run a 40°C - 60°C pre-wash cycle with a mild detergent daily. Do not use bleach. The pre-wash removes the majority of soiling & gets your nappies ready for the main-wash. Store nappies in a dry pail until the main-wash.

#### STEP THREE: MAIN-WASH

Every 2-3 days run a long main-wash cycle at 40°C - 60°C with mild detergent. Do not add bleach, whiteners, boosters or softeners.

#### STEP FOUR: HANG TO DRY

Hang the nappies to dry in shade with the crotch centre draped over the line to evenly distribute the weight.

Make sure nappies & inserts are completely dry before storing for use.

To maintain the longevity of your Econaps nappies please follow our Econaps care guidelines exclusively.

Do not: Use bleach, fabric softener, whiteners, chlorine bleach, oxygen-based bleaching agents, dyes, perfumes, natural soap, or essential oils. Do not use detergents that contain additives from the caustic substance list mentioned previously. Do not tumble dry, do not soak, do not wash in temperatures exceeding 60°C and avoid prolonged sunlight exposure while air drying nappy shells.
