

To be fully transparent (pun intended), I created this overdrive for ME. I wanted a low to medium gain overdrive that could get a lot gainier, more saturated, and thicker in a pinch. It's my always-on low gain drive on my board, but with some girth added via the weight knob and the gain turned up, it can take the place of my 2nd or 3rd gain stage when doing overdubs. I use it to goose my high gain amps when I don't want that screamer-esque mid hump. One time, I was lazy in the studio and used it on bass because it was already plugged in... and it was awesome. Old Blue is my trusty overdrive, so I decided to add it to the Oneder Effects line! I really think you'll dig it.

9V DC center negative power only (not included). Any other power source may cause damage and will void warranty. Current draw less than 100mA. Isolated power is recommended. This pedal does not accept batteries.

CONTROLS

Level - Controls the volume of Old Blue.

Drive - Controls the amount of overdrive Old Blue produces. Counter-clockwise for less gain, clockwise for more gain. 0 to Noon gives you a lot of control in the low to medium gain range, and Noon to Max brings you into higher gain great for rhythm and lead playing alike.

Clipping Toggle - Down (-) for smoother breakup and top end, and Up (+) for more gain, more highs, and a more saturated amp-like feel. This can also be thought of as a vintage/modern switch.

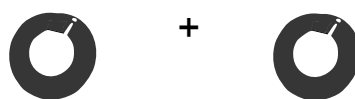

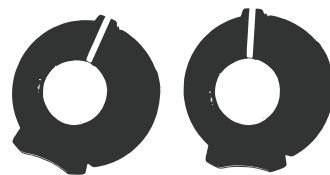

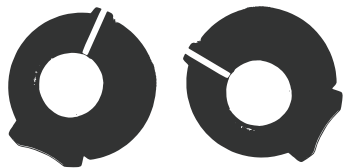

Range - Controls the treble of Old Blue. CCW for less treble, CW for more treble. Find your sweet spot and stay on target!

Weight - Fine-tune the amount of pre-gain thickness. Full CCW for a flat, transparent response, with more lows and low mids as you turn it up. This is definitely a "feel" sort of parameter and is more noticeable at higher gain settings.

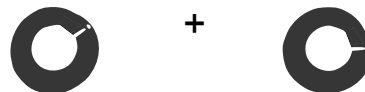

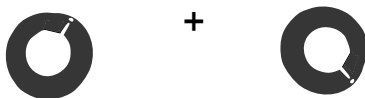

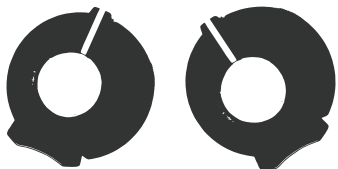

SETTINGS

Breaking Blues

Always On

Crunchy Overdrive

Sick On Bass

Thicc Leads

Modern Distortion

Note: for best results, try these settings using a clean-ish amp sound.
The Old Blue still sounds awesome pushing a dirty amp, though!

WARRANTY INFO

Oner Effects pedals are covered under warranty for materials and workmanship for 1 year after date of shipment, tied to the original owner only. Warranty is non-transferrable. Pedals under warranty will be repaired for no charge. If a pedal is found defective within 30 days of purchase, we will provide a shipping label. In the event of a non-warranty repair, the customer is responsible for the cost of parts, labor, and return shipping.

Cause of any defect or malfunction is determined at our discretion. The warranty covers manufacturing defects as well as mechanical or electrical failure. Warranty does not cover liquid damage, scratches and dents, use of the wrong power supply, or other forms of misuse.

Contact us at onedereffects@gmail.com or through a contact form on our website to initiate a repair. Be as thorough as you can be about your setup, power supply, and the issues you are having with the pedal. Things happen, but we want to make sure we get it right so you can enjoy your gear!
