

Onerderwall is the first dual pedal from Onerder Effects, featuring an all-new Onerder-flavored Muff circuit in Channel 1 and an updated and expanded Onerder Drive in Channel 2 called the Onerderbolt Distortion. With Channel 1 having multiple modes and intensities and Channel 2 being able to go from a boost, to overdrive, to another flavor of fuzzy distortion, the Onerderwall is a box full of endless wild gain textures and possibilities.

Requires a standard 9v center negative 2.1 barrel connector power supply (not included.) Isolated DC power supply recommended. No battery snap.

CONTROLS

FEATURES

Channel 1 Features:

- A circuit that sits somewhere between a Ram's Head and Russian Muff as far as gain and tone. My personal favorite sweet spot.
- A mode toggle that goes from classic scoop (1 bolt), flatter eq and heavier (2 bolts, my personal favorite), all the way to insane low end and maximum level (3 bolts, be prepared to blow out your windows.)

Channel 2 Features:

- The Onederbolt Distortion, which is essentially the Oneder Drive MKII, available for the first time ever with an external bright trim knob (start with this fully maxed).
- An all-new Boost switch, giving you more gain, top end, and sustain than the original Oneder Drive if you so choose. Toggle up for Oneder Drive MKI, toggle down for Boost. Comes in handy when stacking the two sides of this pedal!
- Your choice of (+) op-amp clipping (more full-range eq, more gain, capable of more fuzz-like textures at high gain) and (-) my unique silicon/LED hybrid clipping (more focused midrange, vintage-voiced). This setting sounds particularly awesome and more useful with the Boost switch activated!

Tips To Get Started:

- The order toggle usually sounds best with Channel 2 going INTO Channel 1, but the opposite can also yield VERY good results. If Channel 2 is last in the chain, start with the diode toggle being on + (op-amp clipping) and the boost switch DOWN (on). This will let the maximum amount of signal and treble come through so you can let the doom ensue. Also, try starting with the tone knob on Channel 2 maxed!

WARRANTY INFO

Oner Effects pedals are covered under warranty for materials and workmanship for 1 year after date of shipment, tied to the original owner only. Warranty is non-transferrable. Pedals under warranty will be repaired for no charge. If a pedal is found defective within 30 days of purchase, we will provide a shipping label. In the event of a non-warranty repair, the customer is responsible for the cost of parts, labor, and return shipping.

Cause of any defect or malfunction is determined at our discretion. The warranty covers manufacturing defects as well as mechanical or electrical failure. Warranty does not cover liquid damage, scratches and dents, use of the wrong power supply, or other forms of misuse.

Contact us at onedereffects@gmail.com or through a contact form on our website to initiate a repair. Be as thorough as you can be about your setup, power supply, and the issues you are having with the pedal. Things happen, but we want to make sure we get it right so you can enjoy your gear!
