

# Installation Manual

## SP103E Remote Controller

### Features:

- **Input voltage:** DC5-24V
- **Controllable pixels:** 2048 pixels
- **Minimum pixels:** 300 pixels
- **Support IC models:** WS2811, WS2812B, etc.
- **Application range:** LED addressable RGB pixel light
- **Working temperature:** 20~60°C
- **Remote control distance:** about 20m
- **Effects:** Built-in 358 kinds of effects

													
ON/OFF	AUTO	SPEED UP	SPEED DOWN	MODE UP	MODE DOWN	BRIGHTNESS UP	BRIGHTNESS DOWN	MATCH	SETTING	RED	GREEN	BLUE	WHITE

 <p>Once connected to the power supply, press the <b>ON/OFF</b> button to activate the LEDs, which will resume their previous routine.</p>	  <p>To speed up or slow down the color changing, press either the <b>Speed Up</b> or <b>Speed Down</b> buttons.</p>
  <p>To make the LED strip brighter or dimmer, use the <b>Brightness Up</b> or <b>Brightness Down</b> buttons.</p>	  <p>To switch between the 358 built-in effects, use the <b>Mode Up</b> or <b>Mode Down</b> buttons.</p>
 <p>To activate Test mode, press the <b>AUTO</b> button five times. This will make the attached LEDs cycle through red, green, blue, yellow, purple, cyan, and white. Pressing the <b>AUTO</b> button again will switch the controller to color wheel mode, where it will cycle through a preset sequence of colors.</p>	 <p>To sync the remote control with the receiving controller, press the <b>MATCH</b> button five times until the LEDs flash quickly in white. To unsync, press the <b>MATCH</b> button five times until the LEDs flash slowly in white.</p>
    <p>To remap the RGB keys on the controller, press the <b>SETTING</b> button five times. The LEDs will flash white and then stay solid. Press <b>R</b> for <b>red</b>, <b>G</b> for <b>green</b>, and <b>B</b> for <b>blue</b>, making sure each color matches. Once blue is set, press <b>SETTING</b> again to confirm.</p>	   <p>By default, the controller handles 600 pixels. To adjust this, press the <b>SETTING</b> button five times until the LEDs flash once and turn white. Then, use <b>MODE+</b> to add pixels and <b>MODE-</b> to decrease them (each press adjusts by 60 pixels). Once done, press <b>SETTING</b> to confirm.</p>
