

## CERTIFICATE OF ANALYSIS

### GENERAL INFORMATION

SKU: GS0035

Lot: A070

Package size: 0.1 mg

**Protein:** Histone H2A (NP\_066390; Uniprot P04908) (aa95-106)

**Species:** *Homo sapiens*

**Peptide Sequence (N-Term C-Term):** Ac-CKLLGRVTIAQGG-OH

**Peptide Name:** P-102

#### Backbone:

1A 280 [mg/mL]*	11.3	MW [g·mol <sup>-1</sup> ]	1357.7	QC (MS & HPLC-RP)	Passed
Charged at pH 7*	2	Found M+H [g·mol <sup>-1</sup> ]	1358.5		
Isoelectric Point*	11.53	Ext. coeff. [l·mol <sup>-1</sup> ·cm <sup>-1</sup> ]*	120		
Counter Ions	Trifluoroacetate	% Peak Area by HPLC	≥ 90%	<b>STORAGE CONDITIONS:</b>	
		Found % Peak Area by HPLC	94%	-20°C	

\*Theoretical values without modifications

#### Purification(s)

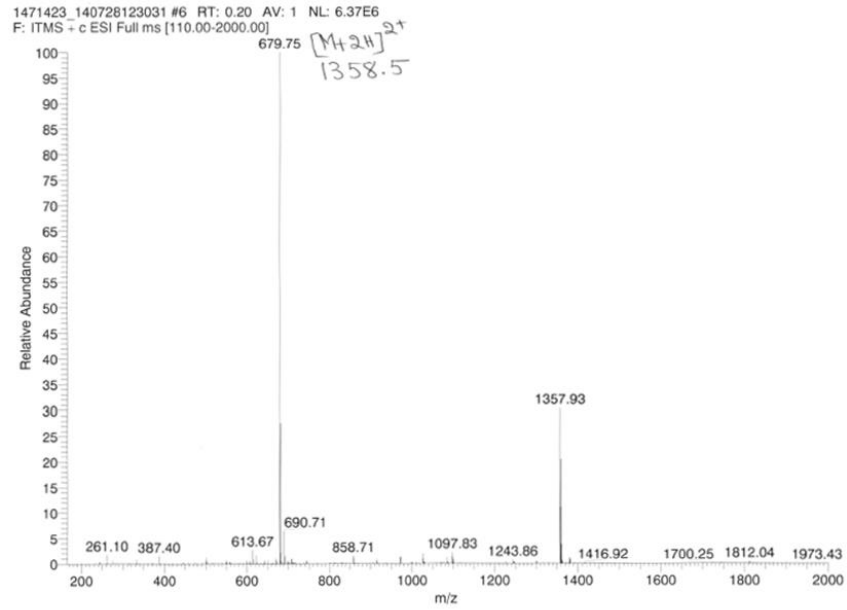

HPLC-RP

#### Peptide Reconstitution and storage

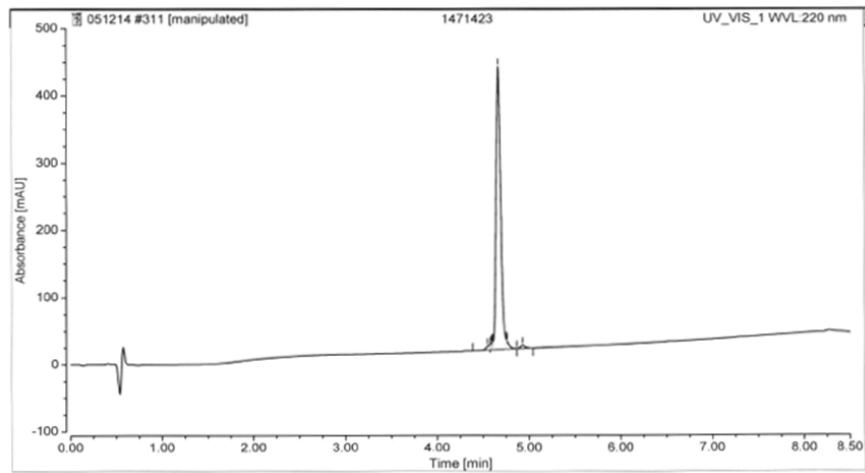

Please equilibrate the vial to room temperature prior opening.

Dissolve peptide in small volume of pure water before adding the desired buffer. Sonication may help dissolution in water. Addition of small amount of aqueous acetic acid for a basic peptide, or aqueous ammonia for acidic peptide could be necessary.

Reconstituted peptides can be stored frozen at -20°C for a very short period but please note that repeated freeze-thaw cycles have to be avoided.

Mass Spec. Data to analyze identity and homogeneity of P-102 peptide.

HPLC-RP chromatogram of purified P-102 peptide.
