DWA1100ADAS

Maximize labor and profits when repairing and calibrating ADAS Systems. The DWA1100ADAS represents the perfect package between mobile wheel alignment capability and ADAS calibration set up. After the alignment, the same CCD front axle sensors are placed on the ADAS support panel calibration bar by means of universal adaptors, leaving the rear axle sensors in their mounted position. With a single keypress, the technician can quickly and simply position the ADAS panel in respect to the vehicle thrust angle in both perpendicular and centering adjustment preparation.
