

Corrosionmonitor.com Coupon Digital Process

HOW IT WORKS

Purafil's uniquely digital corrosion coupon process is modernizing and simplifying reactivity monitoring. In 5 steps, you will have a corrosivity report delivered directly to your account in the **Online Coupon Portal**. This infographic outlines the steps you need to take to successfully utilize this digital service.

STEP 1

Order your Corrosion Coupon online and ship it directly to you! Not sure which model is right for you? You can take our **Product Selector Quiz** on the site to find out.

STEP 1 ORDER ONLINE

 Email Alert: Your coupon has shipped!

STEP 2

When bought on our website, Coupon registration is done 100% online. After receiving your Corrosion Coupon in the mail, **you MUST register on our website** before using.

STEP 2 REGISTRATION

PRO TIP #1

We do NOT accept hand written registration. Please register online. Plus — this will unlock your access to the online portal where you get your results!

STEP 3

After registration, you can now **place your coupon in the intended testing site for 30 days**. Keep track of your removal date in the coupon portal. (Your portal account is created at registration!)

STEP 3 INSTALLATION

PRO TIP #2

It is important to place the coupon within 24hrs of receiving it so it is unaffected by outside factors (your results could be inaccurate if you wait too long!)

STEP 4

Send your coupon back to the **Purafil Lab** in the plastic bag it came in for analysis by our team of corrosion experts. They will determine your corrosion levels based on a normalized 30-day reactivity rate.

STEP 4 LAB ANALYSIS

PRO TIP #3

Save the plastic bag the coupon comes in for easy shipment back to the Purafil Labs!

STEP 5

Receive your **FREE Environmental Corrosivity Report** in the Coupon Portal where you can view & print your results. All results are broken down and correspond with ISA Standards.

STEP 5 REVIEW RESULTS

 Email Alert: Time to return your coupon!

 Email Alert: Your report is ready!
