

# VSTELLE

## V-APOSTLE

### Instruction manual

---

#### A) DISPLAY

#### B) HOW TO SETUP YOUR TIMEPIECE

1. To power your watch, you need to wind up your timepiece. To do so, wind the crown (in normal crown position) clockwise about 15 times. If you notice a slight whirring sound, the movement starts working.
2. Now you are ready to set the time. To do so, pull the crown to 2nd position and turn until the hands are in the correct position.
3. To set the date, push the crown in by one position so that it is in 1st position. Turn the crown counterclockwise until the correct date is displayed. Now you can push the crown back to the normal crown position.

#### C) FAQ

##### **The date changes at noon?**

If the date is set between the hours of around 9:00 PM and 1:00 AM, the date may not change the following day.

##### **The watch doesn't running?**

Automatic movement gains power from manually winding it, or from the automatic winding that occurs from your motion while you are active while wearing it.

##### **The lume is not clear in the dark?**

To 'charge' the lume of your watch, you need to expose it to a light source, preferable those with UV rays, or simply use the flashlight of your phone.
