Western Electric®

MAKER OF ELECTRON TUBES AND HIGH FIDELITY

91E Integrated Amplifier

Available in nickel, gold, and black.
Matched pair Western Electric 300B
electron tubes included.

THE FINEST INTEGRATED EVER MADE

Introducing the 91E, a new integrated amplifier from Western Electric. Meet ambitious, single-ended (SE) sound inspired by the 91A, its famous predecessor in high-fidelity for early Hollywood motion pictures. A groundbreaking new SE design evokes a classic feel with a sonic quality and resolution fit for today's listeners.

Experience over 20 watts per channel—a first for the 300B. Developed over two years, the 91E's patented circuitry intelligently steers the parallel feed constant current source, allowing the 300B to deliver more than double its previously rated output of 7-8 watts. You've never heard the 300B like this before.

91E Integrated Amplifier

A new classic from Western Electric

High fidelity was born from a single question: *How do we create the highest sound quality possible?* In the race to answer this question, Western Electric emerged in the 1930s as the top R&D and manufacturing leader, ushering in a golden age of electroacoustics across subsequent decades. Products like the Type 91A amplifier reproduced Hollywood film soundtracks with game-changing clarity; moviegoers found the emotional punch they were missing. This is just one of countless amplifiers, loudspeakers, microphones, electron tubes, and system components designed by Western Electric engineers.

The 91E Integrated Amplifier, so named for its famous predecessor, continues this legacy of quality. Our first new amplifier innovation in over fifteen years is a powerful and sophisticated addition to the growing landscape of single-ended tube sound.

The 91A's output stage used the 300A (the 300B's nearly identical predecessor) to effortlessly reproduce film soundtracks in a large room, but at only eight watts max. Eight to ten watts has been the standard range for 300B amplifiers manufactured over the years. The 91E, with patented steered current source technology (SCS), unleashes the 300B to perform at more than double the power. Our goal, to create the highest sound quality possible, continues today by making the 300B truly sing. We trust listeners will find just that as Western Electric sound reverberates through their listening rooms.
