## Custom Trimmings

So you've built your own beautiful amplifier, and you need some controls to really add that final touch of class, or maybe your existing preamplifier is looking a little tired, and some new fittings would give it a face lift. Whatever the reason, we can provide an extensive range of fittings to meet your needs.

## Custom, only for us

All of our control knobs are made exclusively for us and are exactly the same as we use on our finished products, so you can rely on the quality being first class. They are machined from solid brass and finished in range of options.

Aligned

Not Aligned

Occasionally we have "seconds" of the above control knobs; these will have minor defaults that make them unusable on finished products. When available, they are 50% off the RRP, shown in our component price list.
