

VALVES

4242E

4300E

845E

Audio Note (UK) is extremely proud to announce our range of power / output valves. Developed in partnership with PSvane, and built exclusively for us to our designs and specifications, these valves are available only from ourselves and our authorised Dealers and Distributors. They are the finest available current production versions of the 211 (4242E) and 300B (4300E), and sound magnificent! Thoroughly recommend for use in all Audio Note (UK) 211 and 300B amplifiers, regardless of age or generation.

We have also now introduced a version of the 845 triode (845E), with a Molybdenum Metal Plate.
