BYBEE Quantum Clarifier

New from Bybee Technologies! The Bybee Quantum Clarifier is a relatively easy DIY upgrade for most speakers. Simply remove screws holding transducer in place and carefully remove transducer to expose rear. Attach Clarifier with attached magnet to rear of transducer.

This product is designed to be magnetically attached on the rear of each set of mid-range and woofer transducers. If only one set of transducers are treated, then the woofer is the best choice. This product can be beneficial for all range of speakers. Generally, the speakers will perform better in all areas: bass, treble extension, low level information, purity of tone, dynamics, and noise reduction. Most users are astounded by the improvements.
