mm (alu) 240 x 72 x 199 (200)mm (wood)

Weight: 1620g (alu) without power supply

2070g (wood) without power supply

CD Box DS2 T - high end CD Transport!

Pure CD players are in contrast to DVD or Blu-ray Disc players frequently better in playback of stereo CDs. The CD Box DS2T is designed exclusively as a pure audio CD transport, sending digital „Red Book standard“ signals to an external digital to analogue converter and is a true master of his trade. In addition to a high-quality sound, a durable drive is essential for the perfect CD playback, that is why we put our CD drives in a torsion-resistant cabinet. Our servo system allows real-time scanning with minimal jitter. We decided to make our newest generation of CD Box a pure transport because ideally the converter electronic and the CD drive are separated from each other to realise the best possible soundsignature. Together with any advanced D/A converter, like our DAC Box DS2 ultra, high end sound reproduction is achieved, as it can not be found elsewhere in this price range.

Visually the CD Box DS2T is adapted to the new DS2 line with their elegant looks and versions with wooden side panels, as pictured above. Sidepanels in the options eucalyptus, walnut and rosewood are available, giving the new DS2 line no less than eight different finishes. That guarantees to meet the high requirements in taste of our valuable customers.
